Backup System

This bash script project manages your important folders and make sure you are backed up.

Structure of folders

- Make a new folder which will have your back up folder and the folder you want to back up
- save the backupd.sh file in the newfolder

How to run

The program takes parameters from the user which are: • *dir* : the source directory that have list of file we need to backup. • *backupdir* : the destination directory that will have the backup • *interval-secs* : time to wait between every check • *max-backups* : maximum number of backups need to be reserved

to run the program open terminal from the newfolder and write

```
sh backupd.sh dir backupdir interval-secs max-backups
```

and that is it you will always be backed up :)
